<b>Scope:</b> <i>Lighthouse Refurbishment</i>	<b>Date:</b> <i>May 2017</i>
<b>Location:</b> <i>Jersey</i>	<b>Products:</b> <i>RH 800, RI 800CRS, RA 500M &amp; RN 500TC</i>

## Overview

The previously applied coating system to the lighthouse had failed and required to be completely refurbished.

## Challenge

The lighthouse had to be encapsulated due to the harsh weather conditions found next to the coast. The encapsulation also ensured that no debris from the surface preparation procedures would fall into the sea.

## Solution

All external cracks were opened up; resulting in the release of water held within the walls. Abrasive blasting was utilised as the surface preparation method. One primer coat of **Damp-crete™ RH 800** was applied over the entire concrete structure. All holes and cracks were then filled with **Chem-concrete™ RI 800CRS**. One coat of **solvent-free, wet tolerant epoxy Epo-chem™ RA 500M** was then applied as an impermeable barrier before one high gloss topcoat of **Fast-guard™ RN 500TC** was applied.

## Outcome

The project was completed within the given timeframe and to the complete satisfaction of all parties involved.

## Benefits

- Solvent-free solution
- Environmentally friendly
- High gloss finish
- Excellent saltwater resistance
- No project delays
- Long-term maintenance-free protection
